

## UtiliTrak

**UtiliTrak** maps and models your utility's infrastructure, including electric, gas, water and wastewater networks. As an enterprise solution UtiliTrak serves as a data warehouse for your utility's networks while providing the necessary interfaces to other applications.

- › Boosts operational efficiency by providing easy access to information about a utility's network infrastructure
- › Offers utility-wide access for both office and field personnel
- › Centralized data warehouse provides a single source of truth
- › Transforms the data managed by **UtiliTrak** into usable information using the interactive query tool
- › Includes a data quality manager tool that identifies and fixes data integrity issues
- › Provides for various integrations and interfaces (CIS, GPS, **Outage Management**, **MDM**, AMI, CAD, engineering circuit analysis and more) based on industry-wide standards
- › Manages inspections and maintenance activities
- › Contains a job manager for scheduling repetitive tasks
